

## 2. INS64 lines

### a. Fees for line construction and service

- i. INS64 refers to a technology in which one line can handle the load of two lines. This allows, for example, the use of a telephone and a fax machine on the same line.

JPY 55,000 per line per event (tax included )

This fee includes communications and calling charges up to JPY 15,000 (not including consumption tax). If your communications/calls exceed this amount, you will be billed for these charges separately.

### b. Items to bear in mind when using INS64

- i. If you intend to use services provided by NTT (D-channel packet communications, F-net service, etc.), be sure to state this fact on your application form. The fees for these services will be billed to you as communications/calling charges.
- ii. Connecting devices (TA, router, etc.) and Internet provider are not included in this service. Please understand that it is the applicant's responsibility to make arrangements for these items.
- iii. Tokyo Big Sight's responsibility when providing this service ends at the modular jack. Please be aware that Tokyo Big Sight will not bear any responsibility if you cannot connect your device despite a properly functioning line.
- iv. Please be aware that Tokyo Big Sight will not assume any responsibility for problems attributable to your communications provider when you are engaged in external communications.
- v. Upon the termination of provision of INS64 service by NTT, it will be unavailable at the Tokyo Big Sight.
